

PRESS RELEASE

## **PwC and Nedscaper announce strategic partnership for integrated cyber resilience**

**Schiphol, 11 February 2026 – PwC Netherlands and cybersecurity specialist Nedscaper have entered into a strategic partnership to future-proof organisations against growing cyber threats. The partnership combines PwC's cyber transformation experience, international scale and boardroom expertise with Nedscaper's deep Microsoft specialization and technical capabilities.**

As geopolitical tensions further increase the threat of cyberattacks, the need for organizations to strengthen their cyber resilience is growing. This is also evident from PwC's annual global CEO survey. "Administrators are increasingly concerned about the impact of geopolitical unrest. That is why almost two-thirds of Dutch CEOs indicate that they are intensifying their cybersecurity in response to the global turmoil. Reactive action is no longer enough, organizations need a clear, supported roadmap that structurally embeds cybersecurity in the organization," says Gerwin Naber, partner Cybersecurity & Forensics at PwC. "This does not require separate 'point solutions', but strategic transformations in which technology, governance and compliance come together in an integrated approach. At this intersection, the partnership between PwC and Nedscaper comes into its own," Naber continues.

Together, [PwC](#) and [Nedscaper](#) offer organizations an integrated, future-proof approach to strengthen cyber resilience. Nedscaper, Microsoft Security Partner of the Year 2025, is a pure-play security specialist with a proven 24/7 SOC/MXDR operation and deep expertise in designing and implementing complex solutions within the Microsoft ecosystem. Thomas Verwer, CEO of Nedscaper, comments: "Our strength is combining deep technical expertise with a pragmatic approach that really helps customers move forward. With PwC, we connect strategy to the operation and help clients securely accelerate their digital transformation. It is a unique formula that we are proud of."

### **Broad spectrum of cyber transformation services**

Together, PwC and Nedscaper offer a broad spectrum of cyber transformation services; from security operations and MXDR (Managed Extended Detection & Resonse) to identity services and ITDR (Identity Threat Detection and Response), with a focus on Microsoft technologies. The strategic partnership underlines the shared ambition of PwC and Nedscaper to help leading organizations anticipate cyber threats and operate future-proof in a rapidly changing digital world.

#### **Boilerplate PwC:**

PwC refers to the Dutch firm and may sometimes refer to the PwC network. Each affiliated company is a separate legal entity. Check [www.pwc.com/structure](http://www.pwc.com/structure) for more information.

At PwC, we want to contribute to trust in society and solve important problems. We see it as our task to deliver quality in the field of assurance, tax and advisory services. More than 5,700 people work together at PwC in the Netherlands. Tell us what is important to you. You can find more information about us at [www.pwc.nl](http://www.pwc.nl).

#### **Boilerplate Nedscaper:**

Nedscaper provides pragmatic cybersecurity solutions for organizations in Europe and Africa. The service is based on Microsoft technology and is integrated into existing systems and processes. The Managed XDR solution provides 24/7 protection by identifying new threats, responding quickly and appropriately, and providing personalized support to improve security levels. From offices in Amsterdam, Cape Town and Johannesburg, and through an international partner network, Nedscaper helps organizations and their employees work with confidence in an increasingly digital world. In 2025, Nedscaper was named Security Partner of the Year by Microsoft.
